Dear Sir/Madam,

I would like to apply for the Digital Developer (Java), advertised on the CW Jobs website. Please find attached a copy of my CV for your consideration.

I am a recent graduate from Glasgow Caledonian University where I achieved a 2:1 Honours degree in Computer Games Software development. During this time, I have gained strong theoritical and practical object oriented programming skills in Java, C# and C++. During my unversity course I worked in Agile development environments using SOLID design principles. The nature of my degree has meant that I have had to have a strong knowledge of user experience and testing which I have worked with extensively over the course of my honours project over the past year. Throughout this time I have been working with Git for version control and to share code with other developers and designers. Receiving constraints from designers has fostered a healthy level of foresight with regard to bugfixing and a strong respect for test driven development which I employ.

I addition to the above i have a strong familiarity with bash scripting in Gentoo and Red Hat Enterprise, gained in a personal capacity prior to university and enhanced in the MThree Alumni training course over the summer. Over the past few months I have also begun working with SQL and have knowledge of the basic commands therein.

Yours faithfully

David Hesketh
